

JobRight Auto-Skip

Simple Mac setup and safe-use guide for Sundhar | Software Engineer edition

READ THIS FIRST

This copy initially contains another person's resume, identity, job preferences, and application answers. Do not start a job queue until every red item in this guide has been replaced with your own truthful information.

The whole process

1	Accept the private GitHub invitation Use the GitHub account connected to isundhar3@gatech.edu.
2	Download the extension Clone the private repository to your Mac.
3	Replace the owner's personal data Use your resume, contact details, work authorization, sponsorship, location, and salary preferences.
4	Describe your software-engineering profile Add only skills, years, projects, and achievements that are true.
5	Load it in Chrome Use Chrome's Extensions page and select the downloaded folder.
6	Run one supervised test Pause automatic submission and verify every answer before hands-free use.

Before you begin

- A MacBook with Google Chrome installed
- A GitHub account connected to isundhar3@gatech.edu
- Your current software-engineering resume as a PDF
- Your LinkedIn URL, phone number, location, and salary target
- Your exact work-authorization and sponsorship answers

PRIVATE ACCESS

Only the repository owner and invited GitHub collaborators can see this repository. Do not forward the files or invite anyone else.

1. Get the private files

Accept the invitation, then download the repository.

Accept the invitation

1	Open the GitHub email Look for an invitation to PrabhjotAhluwalia/jobright-autoskip.
2	Sign in to GitHub Use the account associated with isundhar3@gatech.edu.
3	Click Accept invitation The repository will remain private after you accept.

Download it with Terminal

Open Terminal: press Command + Space, type Terminal, then press Return.

Paste these commands one at a time and press Return after each:

```
xcode-select --install
```

```
cd ~/Documents
```

```
git clone https://github.com/PrabhjotAhluwalia/jobright-autoskip.git
```

```
cd jobright-autoskip
```

```
git switch -c sundhar/profile
```

IF GITHUB ASKS FOR A PASSWORD

Sign in through the browser prompt or use a GitHub personal access token. Your normal GitHub password may not work for command-line cloning.

Where the folder should be

Finder > Documents > jobright-autoskip

2. Replace all personal information

These changes are mandatory before the first application.

A. Replace the profile prompt

Open `jobright_system_prompt.txt` in a code editor. Replace every fact about the current owner.

Done	Item	What to verify
[]	Identity	Full name, first name, last name, email, phone, LinkedIn, GitHub
[]	Location	Current city, commute distance, relocation, remote, hybrid, and onsite preferences
[]	Legal answers	Country, work authorization, sponsorship, clearance, and availability
[]	Career	Job titles, employers, dates, years of experience, projects, and achievements
[]	Education	School, degree, graduation date, certifications, and relevant coursework
[]	Compensation	Minimum salary, target range, and whether the answer is base or total compensation

B. Replace the contact constants

Open `ats_content.js` and find `PROFILE_CORRECTIONS`. Replace every value:

```
fullName, firstName, lastName, email, phone, linkedin
```

PHONE FORMAT

Use digits only in the phone constant. Example: 4045551234. Do not include spaces, parentheses, or +1.

C. Replace the resume

1	Remove the existing resume Delete the other candidate's PDF from the assets folder.
2	Add your resume Use a clear filename such as <code>Sundhar_Software_Engineer_Resume.pdf</code> .
3	Update <code>ats_content.js</code> Change <code>FALLBACK_RESUME_PATH</code> and <code>FALLBACK_RESUME_NAME</code> to your filename.
4	Update <code>manifest.json</code> Replace the old resume filename under <code>web_accessible_resources</code> .

3. Build your software-engineer profile

Use facts from your resume and real experience, not generic claims.

Choose the roles you actually want

- Software Engineer / Software Developer
- Backend Engineer
- Frontend Engineer
- Full Stack Engineer
- Platform / Infrastructure / DevOps Engineer
- Data Engineer or ML Engineer, only if your background supports it

Fill in these technical fields

Do ne	Item	What to verify
[]	Languages	Java, Python, JavaScript/TypeScript, C++, C#, Go, Rust, or others; include truthful years
[]	Frontend	React, Next.js, Angular, Vue, HTML/CSS, browser APIs, accessibility
[]	Backend	Node.js, Spring Boot, Django, FastAPI, REST, GraphQL, gRPC, microservices
[]	Databases	PostgreSQL, MySQL, SQL Server, MongoDB, Redis, DynamoDB, warehouses
[]	Cloud	AWS, Azure, GCP, serverless, Docker, Kubernetes
[]	DevOps	GitHub Actions, CI/CD, Terraform, monitoring, logging, incident response
[]	Testing	Unit, integration, end-to-end, performance, security, test frameworks
[]	System design	Distributed systems, APIs, caching, queues, scalability, reliability
[]	AI/ML	Models, frameworks, data pipelines, evaluation, or LLM work only if real
[]	Projects	Problem, your contribution, technologies, scale, and measurable result

Use specific evidence

Good: “Built a Spring Boot API used by 20,000 monthly users and reduced p95 latency by 35%.”

Avoid: “Expert in every programming language and cloud platform.”

YEARS OF EXPERIENCE

Do not give every skill the same number of years. Use actual professional, internship, academic, or project experience and label it accurately.

4. Review the automatic answers

The extension must match your real situation.

Current automatic rules

Do ne	Item	What to verify
[]	Sponsorship	Currently answers No. Change it if you need sponsorship now or in the future.
[]	Work authorization	Currently answers Yes. Change it if you are not authorized for that country or employer.
[]	Onsite / hybrid	Currently answers Yes to onsite, hybrid, commute, local, and relocation questions.
[]	Country	Currently defaults empty country fields to United States.
[]	Recruiter SMS	Currently answers No to recruiter text-message opt-in.
[]	Consent	May accept required terms, privacy, and consent checkboxes.
[]	Resume	May upload the fallback PDF when a site needs a resume.
NEVER GUESS LEGAL ANSWERS Authorization, sponsorship, citizenship, clearance, criminal-history, disability, veteran, demographic, and conflict-of-interest questions must be answered truthfully. Pause instead of guessing.		

Location questions

The extension may answer Yes to questions such as “Can you work in our office five days a week?” Only keep that behavior if you can actually commute or relocate.

Salary questions

Choose a realistic minimum and target range. State whether it is annual base salary or total compensation. Review unusual hourly, contract, or international-currency questions manually.

Job filters

Review these files so the queue targets software-engineering roles:

<code>jobright_excluded_job_titles.txt</code>
<code>jobright_excluded_job_title_regexes.txt</code>
<code>shared_blocklist.json</code>

Consider excluding sales, marketing, product management, support, hardware, QA-only, director/VP, and mismatched seniority roles.

5. Install it in Chrome

Load the downloaded folder as a private unpacked extension.

1	Open Chrome Use Google Chrome, not Safari.
2	Open the Extensions page Type chrome://extensions in the address bar and press Return.
3	Turn on Developer mode Use the switch in the upper-right corner.
4	Click Load unpacked A folder picker will open.
5	Select jobright-autoskip Choose Finder > Documents > jobright-autoskip, then click Select.
6	Pin the extension Open Chrome's puzzle-piece menu and pin JobRight Auto-Skip.
7	Open JobRight Sign in and confirm the extension popup says it is active.

After changing any profile file

1	Return to chrome://extensions Find JobRight Auto-Skip.
2	Click Reload Use the circular-arrow button on the extension card.
3	Refresh JobRight Refresh JobRight and every open application tab.

EMAIL CODES ARE OPTIONAL

The owner's Google OAuth secret is not included. Start without automatic Gmail OTP. Configure your own Google Cloud OAuth application later if needed. Never commit passwords, tokens, client secrets, or one-time codes.

6. Run one safe test

Watch the first application from beginning to end.

KEEP AUTO-SUBMIT PAUSED Use one test application. Do not turn on hands-free operation until every field below is correct and the application has not been submitted.		
Do ne	Item	What to verify
[]	Name	Your name appears exactly as intended
[]	Contact	Your email, phone, LinkedIn, and GitHub are correct
[]	Resume	Your software-engineering resume is attached
[]	Location	City, country, commute, onsite, hybrid, and relocation answers are true
[]	Legal	Work authorization and sponsorship are correct
[]	Compensation	Salary amount and currency are appropriate
[]	Experience	Years, employers, education, skills, and projects are factual
[]	Options	Selected radio buttons and checkboxes stay selected
[]	Submission	A successful application is counted once; failures are not counted
[]	Timeout	A genuinely stuck job skips after 1 minute 20 seconds without progress
[]	Prompt cycle	The system prompt appears only after 10 confirmed successful submissions

When to stop immediately

- A legal, sponsorship, authorization, or location answer is wrong
- The extension selects an option and then removes it
- The wrong resume or contact information appears
- A site reports success but JobRight remains stuck
- The same application is counted more than once

Pause the queue, take a full screenshot showing the question and all options, and fix the rule before continuing.

7. Quick help

The most common fixes.

Changes are not appearing

Reload the extension at chrome://extensions, then refresh JobRight and every application tab.

Resume upload fails

Confirm the PDF filename matches in all three places: the assets folder, ats_content.js, and manifest.json.

A wrong Yes or No is selected

Pause immediately. Capture the full question and every answer choice. Do not continue until the matching rule is corrected.

GitHub updates are available

```
cd ~/Documents/jobright-autoskip
git switch sundhar/profile
git fetch origin
git rebase origin/main
```

PROTECT YOUR PROFILE

During updates, do not overwrite your personalized prompt, resume, PROFILE_CORRECTIONS, authorization answers, sponsorship answers, or location preferences with the owner's values.

Final ready-to-run checklist

Do ne	Item	What to verify
[]	Private invitation	Accepted using the correct GitHub account
[]	Personal prompt	Every owner-specific fact replaced
[]	Contact details	PROFILE_CORRECTIONS uses your data
[]	Resume	Your PDF filename matches in all required files
[]	Legal answers	Authorization and sponsorship are truthful
[]	Preferences	Location, onsite, hybrid, relocation, salary, and role filters are correct
[]	Chrome reload	Extension and application pages refreshed
[]	Supervised test	One complete application reviewed before hands-free use
